Eleni Maria

Full-Stack Software Engineer

Developer - Designer - Problem Solver #WomenInTech

Skills

- Learning Customer & Business needs
- Server, Network, hosting environments
- Relational and non-relational databases
- Interacting with APIs
- UI & UX

Eleni Maria Designs

A Little About Me

I became a full-stack developer out of necessity at a start-up company where I needed to learn many facets of development to insure success. My ability to understand how things work from top to bottom provides better solutions and I can anticipate problems before they happen. I am a tenacious Developer who loves asking questions until I fully understand a process or problem. I am also a maker. It is a rare day that goes by and I don't create something. It could be code, a handmade gift, a new process or work instruction, or a tasty meal.
